SCOPE

Established in 1969, the INTER-KLIMA Conference is the longest-running event of its kind in this part of Europe. Over the decades, it has evolved into an international meeting point for scientists and professionals working in heating, cooling, refrigeration, air conditioning, and energy conversion in buildings and industry. Since 2023, INTER-KLIMA Conference has been held in parallel with KLIMA-FORUM, bringing together the scientific community and industry professionals to create a comprehensive International event.

Co-organized by four Universities and supported by relevant international scientific organizations and journals, INTER-KLIMA 2027 Conference addresses key challenges, emerging technologies, and current developments in heating, cooling, ventilation, and energy systems. The Conference highlights a broad range of topics, with a particular focus on emerging areas such as:

- Indoor environmental quality and occupant-centred HVAC systems
- Smart readiness, building automation and control systems (BACS)
- Primary energy, exergy and whole-system performance assessment
- Next-generation district heating and cooling systems
- Integration of low-temperature and waste-heat sources in buildings and industry
- Sector coupling and electrification of heating and cooling
- Advanced modelling, optimization and intelligent control of industrial processes

Full list of topics can be found on conference website.
